“Extreme Water Levels on the Upper Great Lakes: What Can Be Done?”

Roger Gauthier will present facts about the current high-water crisis on the Upper Great Lakes, including detailed background on historic changes to the system. He will be assisted by Mary Muter for a detailed question and answer session.

Topics will include information on why water levels are so high, what actions need to be implemented to reduce shoreline damages this year and what to expect over the next few years.

The purpose of these webinars is to outline the problem and offer solutions.

YOU ARE INVITED!

All interested parties are invited to attend.

There will an opportunity for questions to be submitted either before or during the webinar.
